# Summary

University students often struggle to balance their academic and social lives simultaneously. **Campus Connect** is a unified, AI-powered platform designed to help them with the current problem of scattered communication across WhatsApp groups, bulletin boards, and multiple apps by offering two integrated experiences – **AI-based Study Group Matching** and **Campus Clubs & Events Discovery**.

The main business objective is to drive high user engagement and short-term retention by ensuring students receive accurate and meaningful study group matches within their first week on the platform.

# Target User & Persona

Yash, Undergraduate at TIET, Punjab

**Age:** 18

**Year:** 1st Year B.Tech, Computer Science

**Context:** First semester at university, juggling between core courses, clubs, and hostel life.

**Tech Habits:** Heavy mobile usage. WhatsApp and Instagram daily. Discord for clubs. Google Calendar for time blocks. Uses the university SSO for apps.

**Motivations:** Join meaningful study groups with minimal noise from multiple apps, find peers at a similar pace and proficiency, stay updated on campus events, and find like-minded students for projects.

## **Frustrations / Pain Points:**

1. Important study group information buried in chat noise.
2. Hard to find peers at a similar proficiency or schedule.
3. Gets late updates about club events and deadlines.
4. Feels his academic and social circles are fragmented.

# Solution Overview (MVP)

05/18

**AI-Driven Study Group Matchmaker** is the core MVP feature, helping students quickly find and join the right study group

This feature automatically connects students with peers studying similar subjects, at a similar learning pace, and with compatible study preferences.

## AI Matchmaker Flow:

- 1. User Signup:** The student signs up with their university ID/ mobile number and selects their course, current subjects, and preferred study time.
- 2. AI Matching:** The system uses a simple AI engine to compare preferences and learning goals and suggest the most compatible peers.
- 3. Review & Join:** The student looks at one group suggestion and has an option to look for an alternate match, and can join instantly.
- 4. Group Chat Creation:** Once joined, the platform auto-creates a group chat where members can schedule sessions, share notes, or plan discussions.

## Minimal Feature Set:

- AI-driven group matching based on course, topic, and study time
- Simple student profile (basic academic details)
- Auto-created group chat/ video meet for coordination

# User Stories

## User Story #1: AI-Based New Group Formation

As a student, I want to let the AI automatically form a study group for me so that I can quickly find compatible peers without spending time searching.

### Acceptance Criteria:

- The AI suggests the best group based on similar subjects, goals, and study timings.
- Users can instantly see and join group.

## User Story #2: Custom Group Creation

As a student, I want to create my own group manually so that I can invite friends or classmates who share specific goals or interests.

### Acceptance Criteria:

- “Create Custom Group” option allows naming the group, selecting a topic, and adding members manually.
- Invitees receive notifications with “Accept” or “Decline” options.

# User Stories

## User Story #3: Events & Clubs

As a student, I want to explore campus events, workshops, and clubs so that I can balance my academic and social life.

### Acceptance Criteria:

- “Explore” tab shows categorized events (academic, tech, sports, cultural).
- Clicking “Join” or “View” adds the event to the personal planner.

## User Story #4: Group Collaboration & Notes Sharing

As a student, I want to chat with my group and share study resources so that we can collaborate efficiently.

### Acceptance Criteria:

- Each group has a built-in chat space.
- Members can share notes, links, or upload study materials.
- Notification badges appear for unread messages or shared files.

# User Stories

## User Story #5: User Profile & Achievements

As a student, I want to maintain a personal profile showing my academic interests and group activities so that others can connect with me easily.

### Acceptance Criteria:

- Profile displays basic info (photo, name, course, year).
- User can edit profile details.
- Others can see user's ratings and preferences.

## User Story #6: Premium Upgrade (Future Feature Validation)

As a power user, I want to upgrade to a premium version so that I can unlock extra features like Unlimited Group Switches, Exclusive Mentor Access and Early Event Registration.

### Acceptance Criteria:

- “Upgrade to Premium” button is visible in settings.
- Users see a various plans comparison table

# Third-party APIs

| FEATURE  | PURPOSE  | API/TOOL  |
|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| University Authentication                                                                 | Secure login using institute credentials                                                    | University SSO/ OAuth                                                                        |
| AI Matchmaking Engine                                                                     | Generate study group suggestions                                                            | Node backend with ML model                                                                   |
| Database Management                                                                       | Store user profiles, preferences, and matches                                               | MongoDB                                                                                      |
| Group Chat & Communication                                                                | Enable group discussions and file sharing                                                   | Socket.io                                                                                    |
| Scheduling & Calendar Sync                                                                | Manage study sessions and reminders                                                         | Google Calendar API                                                                          |
| Event & Club Discovery                                                                    | Fetch / display university events                                                           | Local DB                                                                                     |
| Notifications                                                                             | Send real-time updates and alerts                                                           | Firebase Cloud Messaging                                                                     |

# Launch Success Metrics

17/18

## **ACQUISITION: Onboarding Reach**

**METRIC AND PURPOSE:** This is the number of students signing up using University SSO / OAuth within the first month, showing early adoption and ease of access to the application.

TARGET  $\geq$  50 % of active students

## **ACTIVATION: Successful AI Match**

**METRIC AND PURPOSE:** This is the percentage of users who complete their profile and receive their first AI-generated study group match within 24 hours of sign-up, validating that the AI Matchmaker delivers immediate value.

TARGET  $\geq$  60 %

## **RETENTION: Active Usage After Launch**

**METRIC AND PURPOSE:** This is the percentage of users returning weekly to chat, schedule sessions, or explore events after the first month of sign-up, measuring ongoing engagement and usefulness of the product.

TARGET  $\geq$  40 % weekly active users

# Thank you
