

SaveEase

Building an “Auto Save Jar” that automatically saves some of the amount in a goal jar.

VISION

Empower first-time earners with financial confidence and security through easy saving.

MISSION

Enable users to save automatically without anxiety or extensive knowledge of savings.

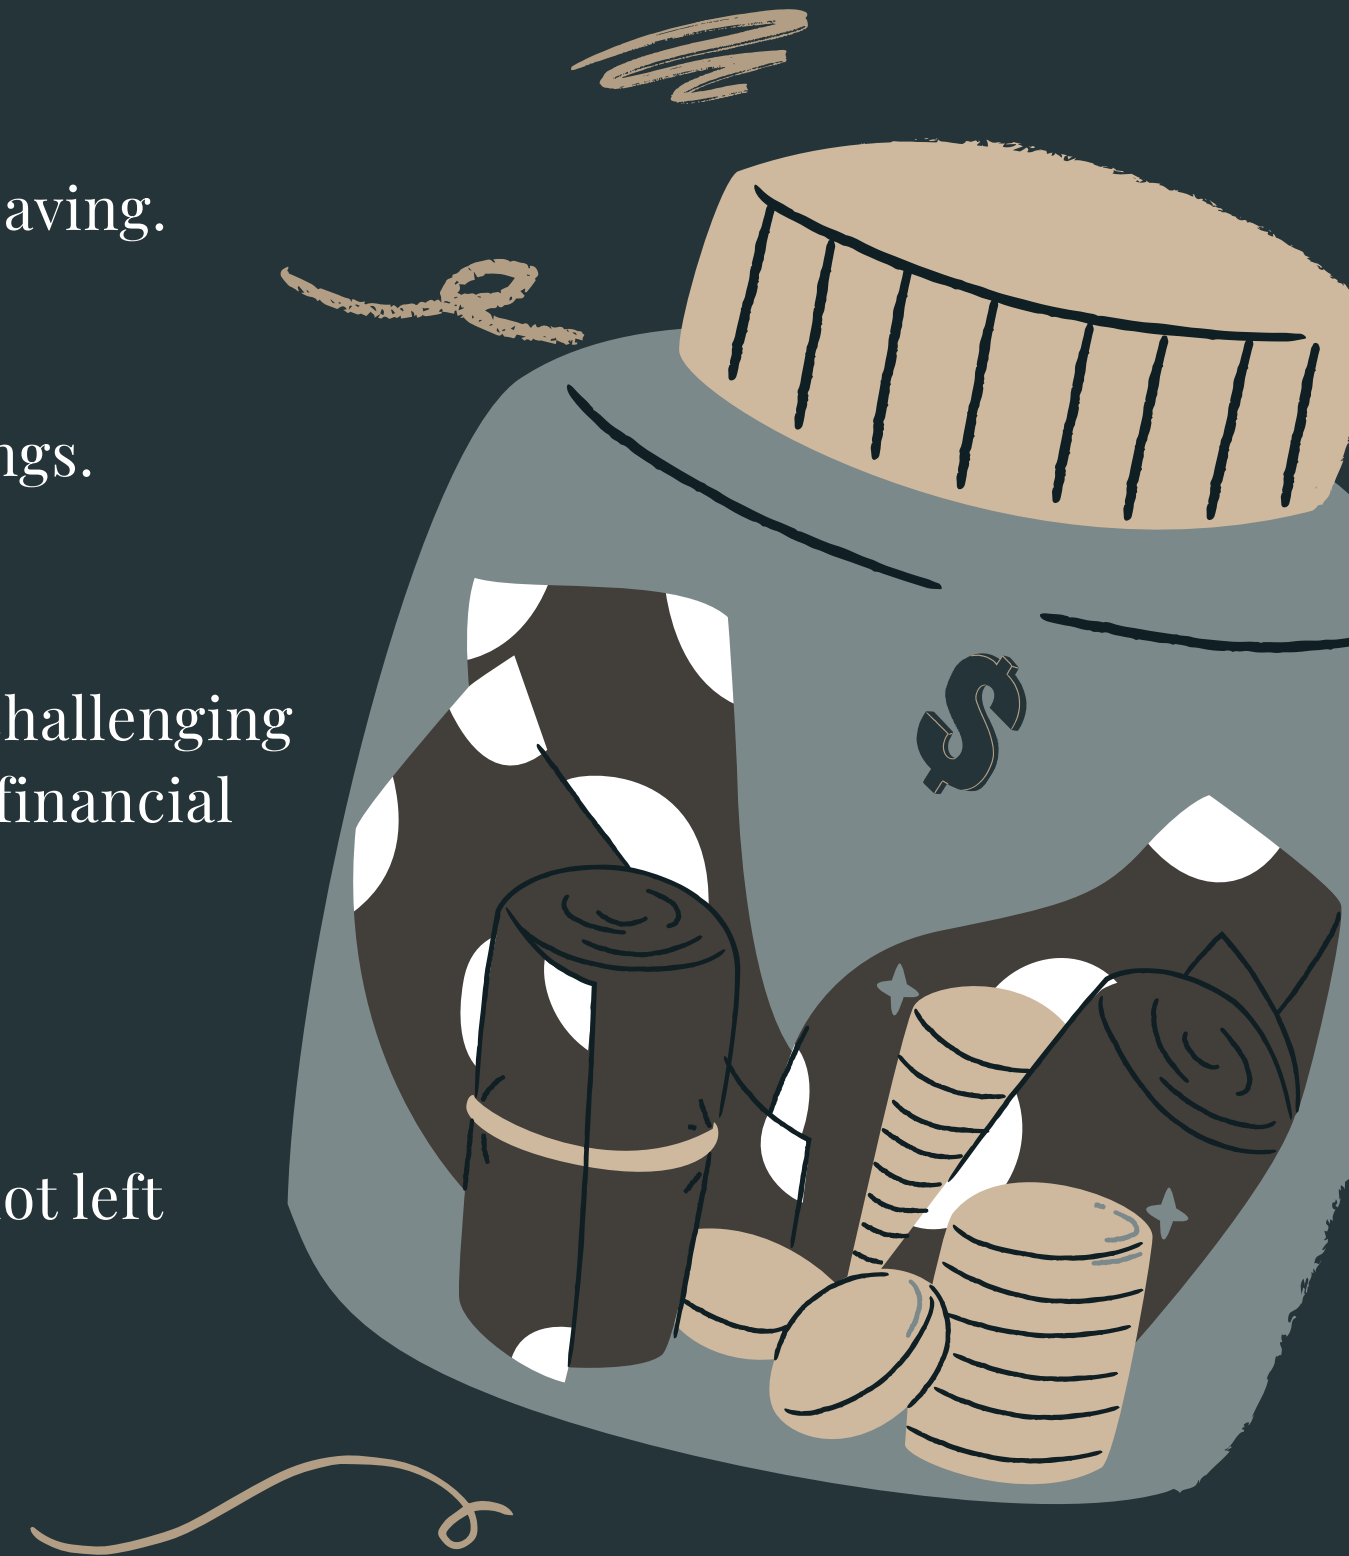

PROBLEM STATEMENT

When my salary is credited, I want to set aside a portion for savings; but, I find it challenging due to the complexity of existing finance apps, which often assume a high level of financial knowledge.

JOBS TO BE DONE

Functional: Save amount automatically, without anxiety and savings knowledge.

Social: Feel a sense of security and accomplishment when looking at savings and not left behind compared to peers.

User Research

Who will you talk to or observe?

- Gig workers, since they perform temporary, project-based work arrangements, savings are necessary for them.
- Young salaried employees, since they are earning money for the first time, often feel overwhelmed when it comes to managing it.

Methods to be used

- Interviewing 2–3 young professionals to have a deeper understanding of their problem.
- Short surveys

Goal

- To have a deeper understanding of what confuses the young professional in managing their savings, and why they often feel confused in using the already existing app. Also getting to know why they want to save, so that we can build a solution that solves their problems.

Persona Creation

Anna
23 years old
First-job salaried professional

“I aspire to save for emergencies, but I find online shopping and impulsive spending to be quite overwhelming.”

GOALS

Want to save ₹5000/month for any emergency.

BEHAVIORS

- A quick shopper who spends money on unnecessary things.
- Lacks financial discipline.

FRUSTRATIONS

- Finance apps look too “bank-like” and confusing.
- Gets overwhelmed by too many options

CONTEXT

Uses only UPI apps (GPay, Paytm) daily.

Michael
24 years old
Gig worker, part time developer

“I aspire to save for a semi-annual trip, but my tendency to neglect expense management often results in overspending.”

GOALS

Want to save for a half-yearly trip with friends.

BEHAVIORS

- Frequently uses UPI apps but often neglects expense management, leading to overspending.
- Wants structure but not complexity.

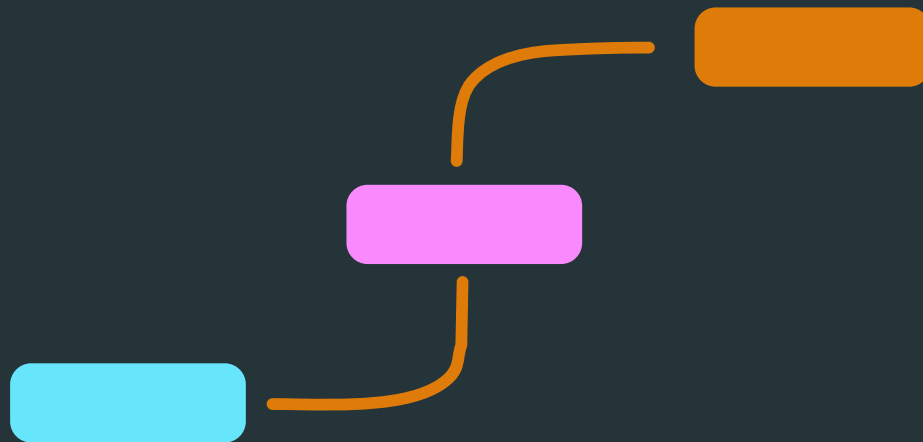

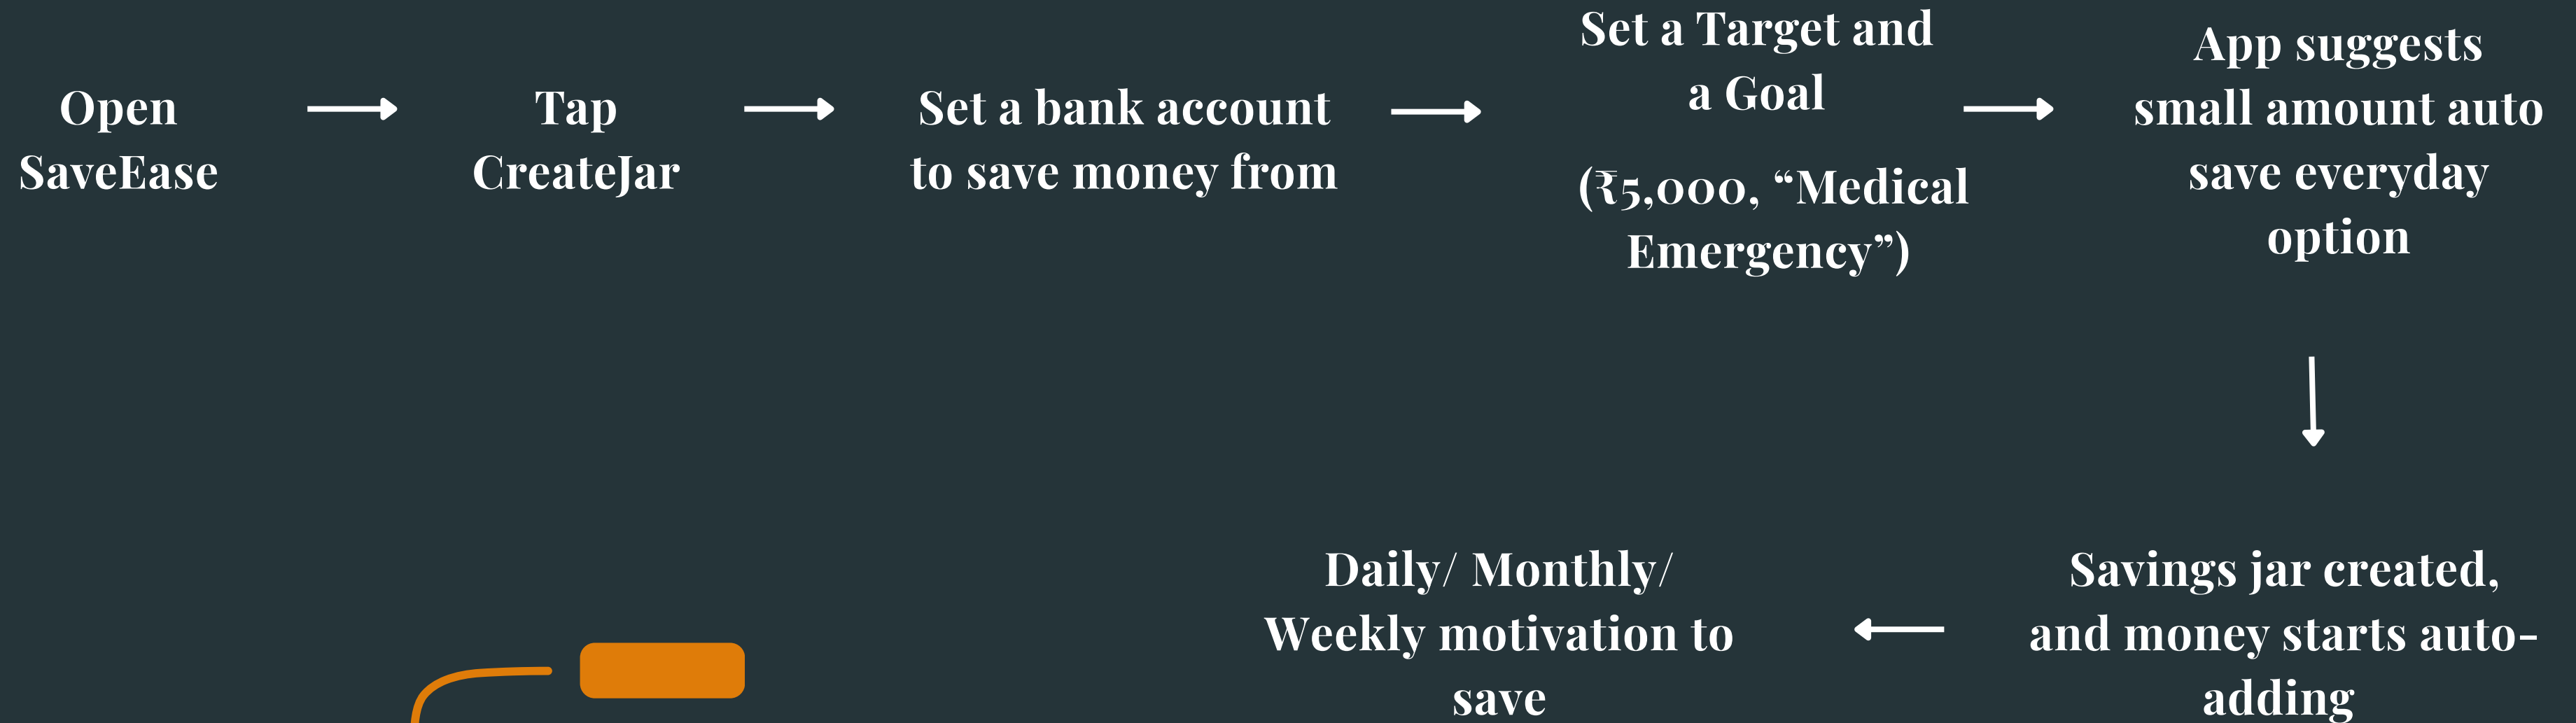

FRUSTRATIONS

- Finds it difficult to invest as Budgeting apps feel too heavy to use.
- Faces challenges with budgeting due to presuming a greater level of financial knowledge.

CONTEXT

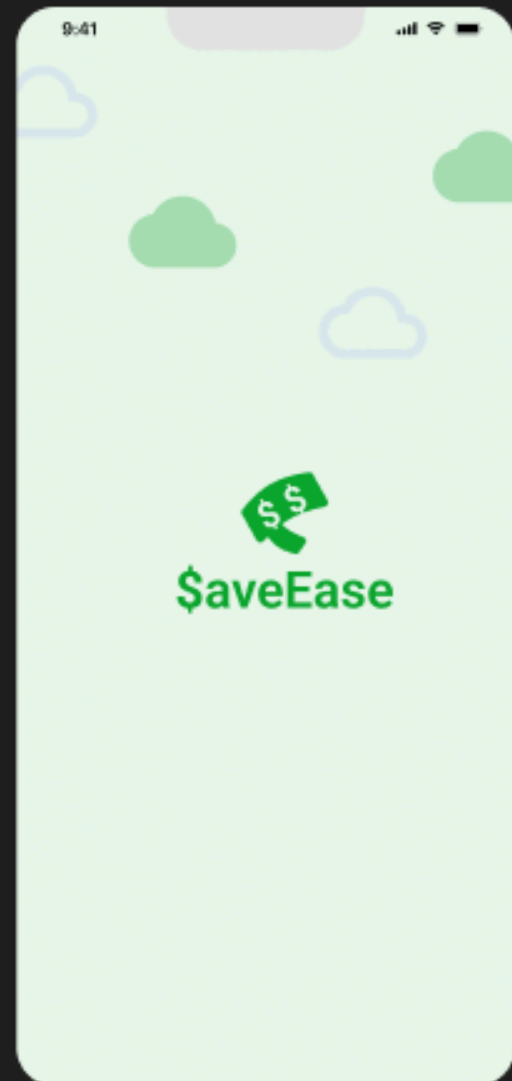

Wants a simpler tracking application for managing finances.

Savings

USER STORY 1

As a newly employed professional, I want to save money monthly so that I can utilize my investments in the event of a medical emergency.

ACCEPTANCE CRITERIA:

When I open the app and create a new Jar, then a fixed small amount should be automatically deducted from my account.

EFFORT ESTIMATION:

3 points (UI + simple logic)

USER STORY 2

As a part-time employee, I want my spending to automatically round up into savings so that I can save without effort for my half-yearly trip with friends.

ACCEPTANCE CRITERIA:

When I choose the Round Up Saving option, then an additional ₹10–20 rounded amount should be added to my savings jar with each UPI payment I make.

EFFORT ESTIMATION:

7 points (Rounding Up option + Moderate UI updates)

Minimum Viable Product

Jar Creation Features

Setting Up a Jar

Users have the ability to create a “Jar” tailored for a specific goal, such as for emergencies, travel, and more.

Monthly Auto-Deduction

A predetermined small amount is automatically deducted each month and deposited into the Jar.

User-Friendly Interface

A straightforward interface allows users to create Jars, view their balance, and toggle the auto-deduction feature.

Manual Deposit Option

Users can also add additional funds at any time.

Roadmap

Now

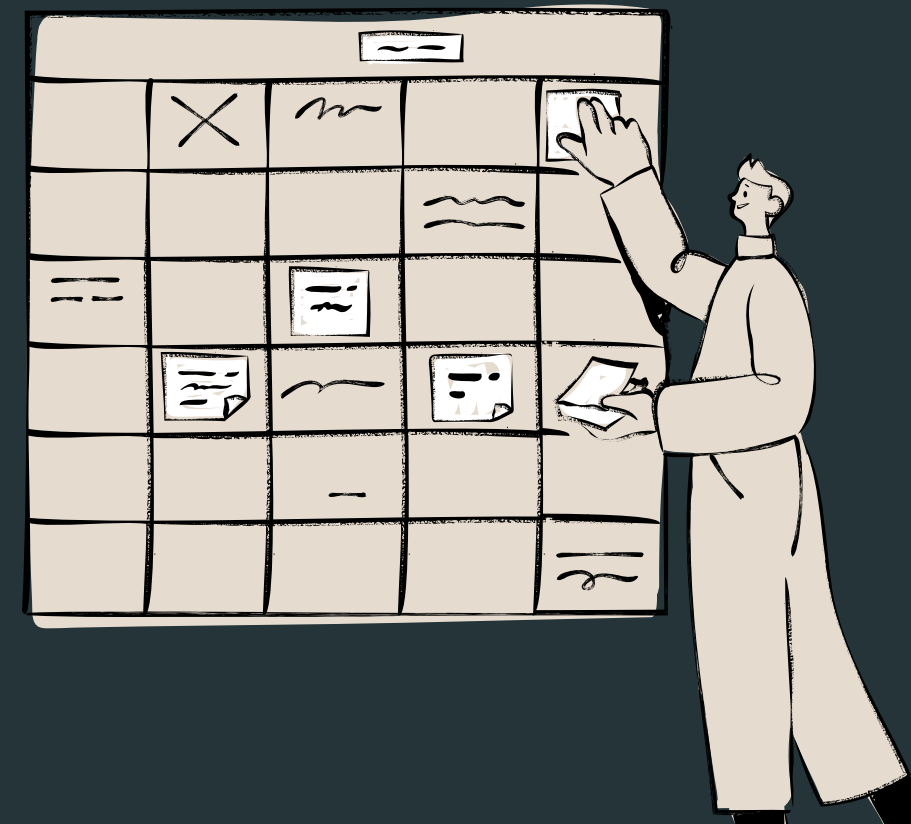

- Create Jar (goal name, purpose, amount).
- Fixed monthly auto-deduction (₹X/month).
- Show Jar balance in-app.
- Basic notifications

Next

- Moderate UI upgrade: choice of savings methods (Monthly / Round-Up).
- Spending insights dashboard (showing how much saved automatically).

Later

- Gamification: badges for consistent savers, streaks.
- Social saving: group Jars with friends (e.g., for trips)
- Integration with investment products

Usability Testing Plan

Objective

Test if users can easily create savings Jars and understand auto-deduction vs round-up savings.

Participants

- 5–7 newly employed professionals.
- 3–5 part-time employees.

Tasks

1. Create a Jar for “Medical Emergency.”
2. Set up auto-deduction of ₹500/month.
3. Enable Round-Up Savings for UPI payments.
4. Check Jar balance and savings summary.

Success Metrics

- **Completion rate:** % of users who successfully create and activate savings features.
- **Time on task:** How quickly users complete setup (<2 minutes target).
- **Error rate:** Wrong clicks, confusion, failed attempts.
- **Satisfaction score (1–5):** Ease of use, confidence in feature.

Method

- Remote moderated testing (screen share + think aloud).
- Post-test survey (what worked well, what was confusing).
